Technical Data Book

EHS Mono R290 for Europe
(R290, 50Hz, HP)

Model : Outdoor unit (AE***CXD*K/EU)
Hydro unit (AE***CNW*M/G/EU)

History

Version	Modification	Date	Remark
Ver.1.0	Released EHS Mono for Europe TDB (R290, 50Hz, HP)	23. 06. 15	
Ver.1.1	Updated the final Specification	23. 08. 17	
Ver.1.2	Updated the Control kit Specification	23. 11. 30	

Nomenclature

Model Name

Features & Benefits

EHS Mono R290

Highlights

R290 Refrigerant

The natural R290 refrigerant helps conserve the ozone layer and has less impact on global warming.

Hot Water Temperature of up to 75°C

Enjoy a consistent supply of extremely hot water of up to 75°C.

Low Sound Level of 35dB(A)

Make less noise whenever you need.

Features & Benefits

EHS Mono R290

R290 Refrigerant

The natural R290 refrigerant has an Ozone Depletion Potential (ODP) of zero and a Global Warming Potential (GWP) of 3, which is lower than conventional R32 or R410A refrigerants*. It also has a reinforced design with 5 layers of safety features to reduce the risks of using the R290 refrigerant.

* GWP by refrigerant: R290 = 3, R32 = 675, R410A = 2088.

Creates extremely hot water – up to 75°C

Enjoy a supply of extremely hot leaving water of up to 75°C*, which enables effective convection heating and provides sanitary water. It improves energy efficiency**, as it can supply sanitary water of up to 70°C*** using only a Heatpump. And it is hot enough to kill Legionella bacteria****.

* Leaving water temperature from an outdoor unit is 75°C when the outdoor temperature is -10~35°C. Sanitary water leaving a DHW tank is 70°C when the outdoor temperature is -10~43°C. Results may vary depending on the actual usage conditions.

** Based on internal testing compared to a conventional model AE***RXYD*G/EU.

*** Leaving water temperature of sanitary hot water, when the outdoor temperature is between -10~43°C. If the outdoor temperature is lower than -10°C, a Booster Heater is required. Results may vary depending on the actual usage conditions.

**** Sanitary hot water should be stored at 60°C or higher in order to kill Legionella bacteria.

Features & Benefits

EHS Mono R290

Adjustable, 4-step, low-noise operation Low Sound Level of 35dB(A)

Make less noise whenever you need. The 4-Step Quiet mode* enables adjustable low-noise operation to meet the noise level regulations in European countries. Simply select from four different steps and reduce the sound level by 3dB, 5dB, 7dB or keep it as low as 35dB(A)*** to reduce disturbance.

* The heating performance may be reduced when operating in Quiet mode.

** The Technical Instructions on Noise Abatement (German: TA-Lärm) contain regulations for protecting the general public or neighborhood from noise emissions.

*** Based on internal testing. The noise level is measured 3m away from the front of the outdoor unit. Results may vary depending on environmental factors and individual use.

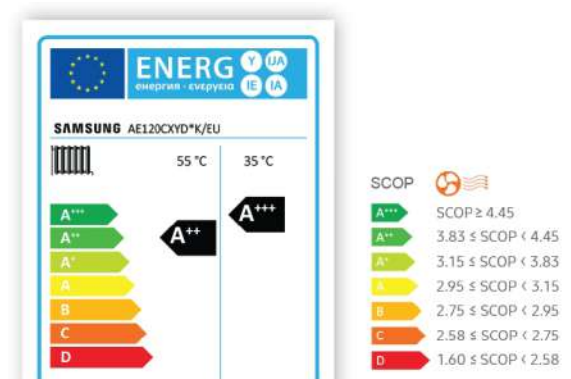

Enhanced efficiency High Efficiency (SCOP A+++)

Enjoy consistently high energy savings. It has an enhanced Seasonal Coefficient of Performance (SCOP) A+++ energy efficiency rating across the whole range of capacities*. It has been increased by up to 14%** compared to conventional models and is up to 15% more than the A+++ rating criteria***.

* Based on internal testing when generating 35°C water, in accordance with EN14825. Results may vary depending on the system configuration and actual usage conditions.

** Based on internal testing when generating 35°C water using an EHS R290 Mono 5kW model, AE050CXDEK/EU (SCOP: 5.10), compared to an EHS R32 Mono model of the same capacity, AE050RXYDEG/EU (SCOP: 4.46).

*** Based on internal testing when generating 35°C water using an EHS R290 Mono 5kW model, AE050CXDEK/EU (SCOP: 5.10), compared to the criteria of A+++, SCOP≥ 4.45.

NOTE

- Specifications may be subject to change without prior notice.
- 1) A2W Condition #1 : (Heating) Water In/Out 30°C/35°C, Outdoor Air 7°C[DB]/6°C[WB];
(Cooling) Water In/Out 23°C/18°C, Outdoor Air 35°C[DB].
- 2) A2W Condition #2 : (Heating) Water In/Out 40°C/45°C, Outdoor Air 7°C[DB]/6°C[WB];
(Cooling) Water In/Out 12°C/7°C, Outdoor Air 35°C[DB].
- 3) A2W Condition #3 : (Heating) Water In/Out 47°C/55°C, Outdoor Air 7°C[DB]/6°C[WB].
- 4) A2W Condition : (A2W35) Water In/Out -/35°C, Outdoor Air 2°C[DB]/1°C[WB];
(A-7/W35) Water In/Out -/35°C, Outdoor Air -7°C[DB]/-(※ Peak Capacity)
- 5) Select wire size based on the value of MCA.
- 6) Soundpressure level is obtained in an anechoic room.
 - Sound pressure level is a relative value, depending on the distance and acoustic environment.
 - Sound pressure level may differ depending on operation condition.
 - dBA = A-weighted sound pressure level
 - Reference acoustic pressure 0 dB = 20uPa
- 7) Sound power level is an absolute value that a sound source generates.
 - dBA = A-weighted Sound power level
 - Reference power : 1pW
 - Measured according to ISO 3741
- 8) These products contain R290 (GWP=3) which is fluorinated greenhouse gas.
- 9) The system is operated in (-25°C ≤ Outdoor temp. < -20°C) condition, but no guarantee of capacity.
- 10) The system is operated by only Booster Heater in special condition (35 °C < Outdoor temp. ≤ 43°C).

NOTE

- Specifications may be subject to change without prior notice.
- Sound Pressure Level
 - Sound pressure level is obtained in an anechoic room.
 - Sound pressure level is a relative value, depending on the distance and acoustic environment.
 - Sound pressure level may differ depending on operation condition.
 - dBA = A-weighted sound pressure level
 - Reference acoustic pressure 0 dB = 20μPa
- Sound Power Level
 - Sound power level is an absolute value that a sound source generates.
 - dBA = A-weighted sound power level.
 - Reference power : 1pW.
 - Measured according to ISO 3741.

1. Heating capacity

- Capacity is according to EN14511.
- Valid for heated water range (ΔT = Leaving water temperature - Entering water temperature)
: If $LWT \leq 50^\circ C$, $\Delta T = 5^\circ C$ or $50^\circ C < LWT \leq 60^\circ C$, $\Delta T = 8^\circ C$ or $LWT > 60^\circ C$, $\Delta T = 10^\circ C$, within the minimum ~ maximum water flow rate.

2. Cooling capacity

- Capacity is according to EN14511.
- Valid for Cooling water range (ΔT = Entering water temperature - Leaving water temperature)
: $\Delta T = 5^\circ C$, within the minimum ~ maximum water flow rate.

3. Power input : Power input is according to EN14511.

4. Peak value : Tested without defrost operation in accordance with EN14511.

※ The real capacity would be changed according to the install environment.

4. Control Kit

4-3. Electrical wiring diagram

NOTES

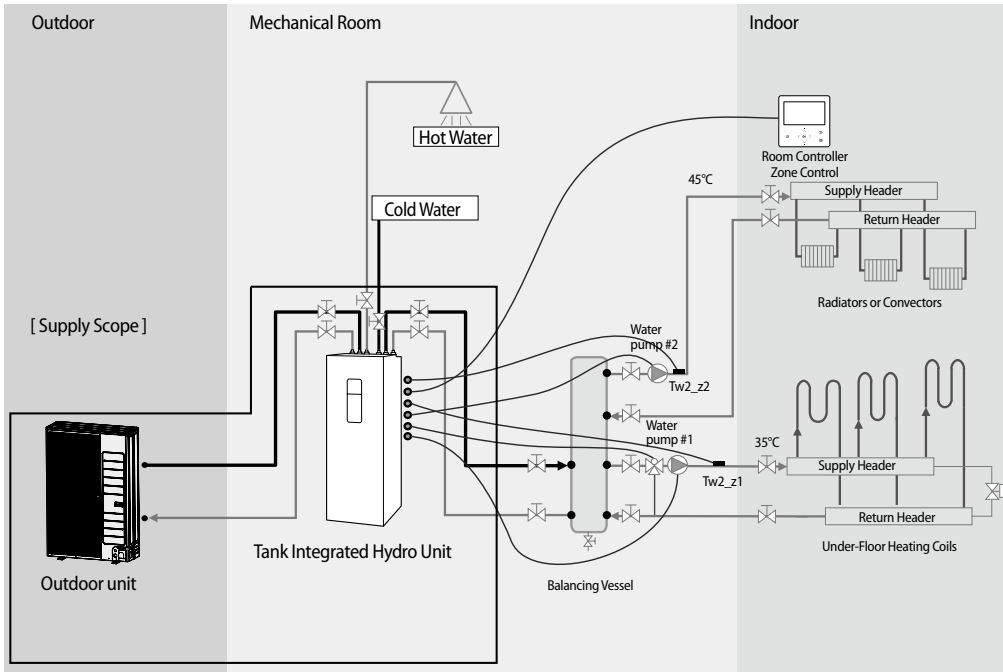

1. It does not support external input(CNS083)/output(CNS081) signal function.
2. MIM-E03CN model does not support CNS051 function. Therefore there is no zone control via wired remote controller or SmartGrid ready functions available.

5. Installation

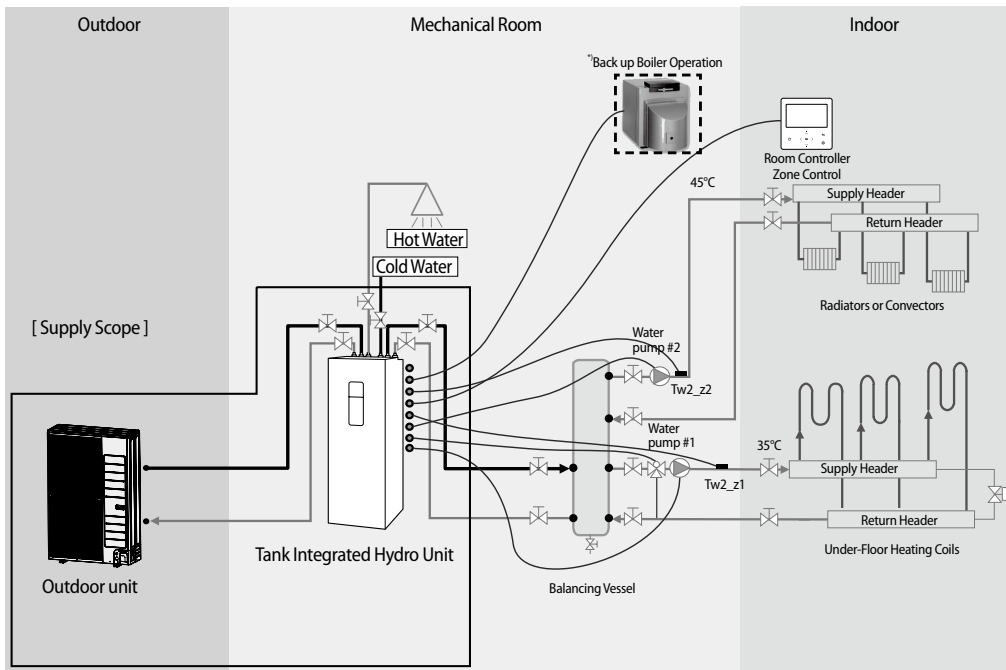

Tank integrated hydro unit

* The below examples are for illustration purposes only.

Application 1: Space heating + water heating

Application 2: Hybrid application(backup boiler)

*) We control only the on / off signal of backup boiler according to outdoor temperature. Backup boiler should be installed with own device according to the field condition.

- Samsung has not responsible for performance and stability of backup boiler.
- Water quality must be according to EN directive 98/83 EC.

5. Installation

Tank integrated hydro unit

Wiring work

* When you use inlet hole through the cabinet top positions for power/communication wires, please fix the wire by using mount tie of the cabinet right.

2 wires for communication cable

Communication cable connection

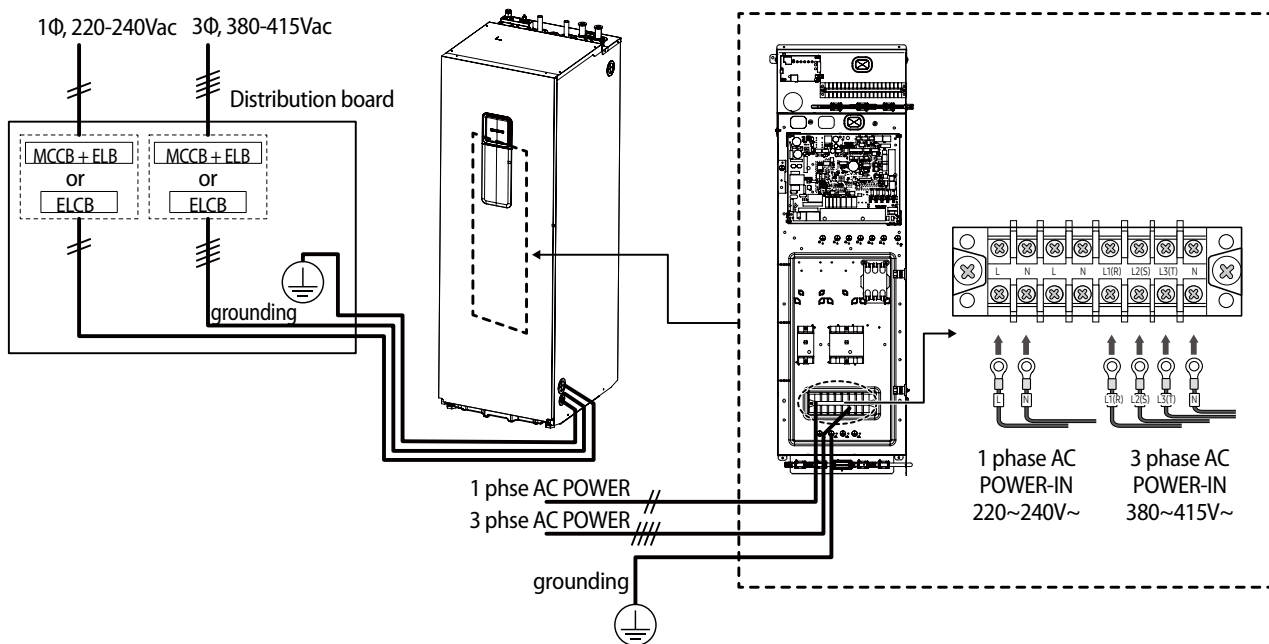

5. Installation

Tank integrated hydro unit

1.1 phase product

2. 3 phase product

- If the supply cable is damaged, it must be replaced by a special cable or assembly available from the manufacturer or installer.
- Circuit Breaker (ELCB, ELB, MCCB etc.) for outdoor and indoor units shall be installed by installers because they are not sub-parts in the units. But you don't need to install for hydro unit (Built-in ELCB).
- It cause damage to chassis, PCB parts if the main power is not connected correctly. You should make certain that R, S, T is connected correctly before turning on the main power. (3 phase models only)

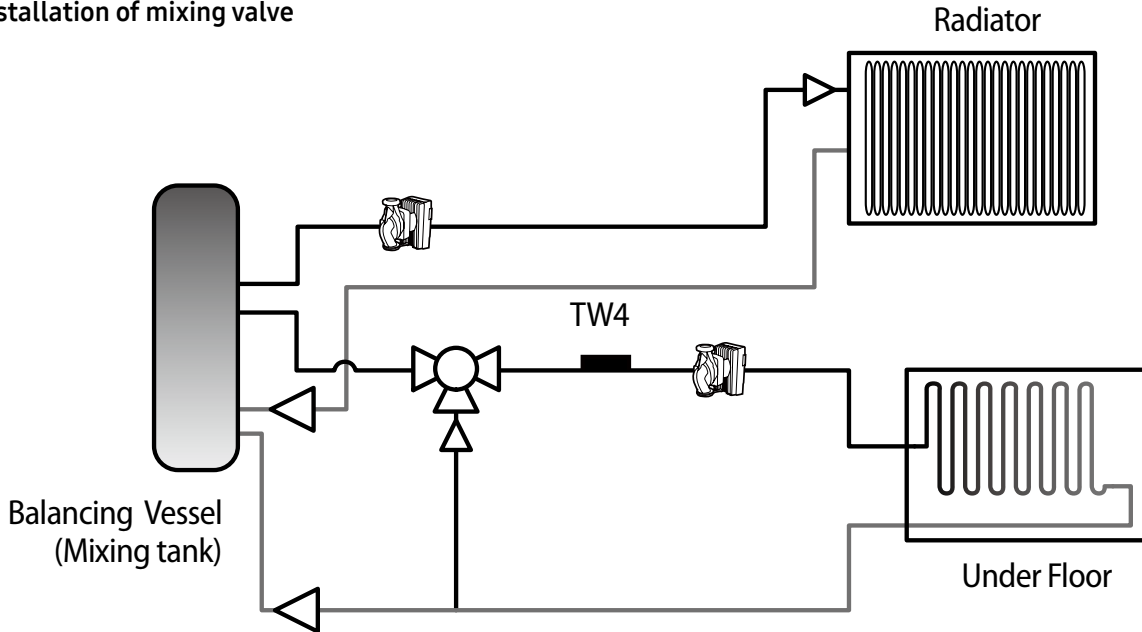

* ELCB : Earth leakage circuit breaker
ELB : Earth leakage breaker
MCCB : Molded case circuit breaker

5. Installation

Tank integrated hydro unit

Mixing Valve

Installation of mixing valve

When two different zones are used with different temperature, adjust the temperature of discharge water to high temperature water and control the amount of bypass to provide low temperature water by applying the mixing valve and temperature sensor of the mixing valve (TW4).

- 1 Select a mixing valve from the manufacturers as below (recommended) and install it at the entrance of the zone.
- 2 Install the supplied temperature sensor (TW4) on the rear part of the mixing valve. Install TW4 Sensor within 1m of Mixing Valve.
- 3 Since running time varies depending on the manufacturer, set the FSV (default 90 sec.) by referring to the FSV value below.

Maker		BELIMO	SIEMENS	HONEYWELL
Model code	3 Way Valve	R3020-6P3-S2	VXP45 .20-4 (kvs 4)	V5011E1213
	Actuator	LR230A(-S)	SSB31	ML6420A3015
Running time		90 sec.	150 sec.	60 sec.
FSV(#4046) setting		9	15	6

* The table above is for your reference. It can be changed without advanced notice.

- 4 Set the FSV value by referring to the table below depending on installation environment.

Function	Details	Code	Unit	Default	Min.	Max.
Mixing valve	Use or not	4041	-	0(No)	0	2
	Target temperature difference (Heating) (TW3-TW4)	4042	°C	10	5	15
	Target temperature difference (Cooling) (TW4-TW3)	4043	°C	10	5	15
	Control factor	4044	-		1	5
	Interval of valve control	4045	Min .		1	30
	Running time (10 second unit)	4046	(x10) sec		6	24

* 4041 =1 : Controlled based on the temperature difference (4042, 4043)

* 4041 =2 : Controlled based on the temperature difference of the WL value

5. Installation

Tank integrated hydro unit

ex) Heating

- * The mixing valve is controlled based on the FCU WL value.
- * As the #4044 value increases and the #4045 value decreases, the control speed increases. (Temperature hunting may occur if the control speed increases depending on the load.)
- * The additional pump and mixing valve should be purchased separately. TW4 sensor is included in the product accessories.
- * TW3 : Water temp. sensor 3

- When the thermostat control is set as 'Use', the mixing valve can be used for Zone 1 and Zone 2. (When both FSV #2091 and #2092 are set as 1/2)
- When using Zone control (FSV 4061 = 1), ignore Thermostat signal.

2-zone control using Thermostat

Description	No. of wires	Max. current	Thickness	Supply Scope
Mixing valve	4	22 mA	> 0.75 mm ² , H05RN-F or H07RH-F	Field supply (230 V~, Input)

5. Installation

Tank integrated hydro unit

- 1 Before the installation, hydro unit should be turned off.
- 2 Using the appropriate equipment to correct position of terminal block as shown on the diagram.

2-Zone Control Using Remote Controller

You can operate the 2-zone control using a mixing value, water-out temperature sensors, and built-in or external room temperature sensors installed in a wired remote controller.

When both zones are simultaneously Thermo on, the operation is performed based on Zone2. Therefore, set the zone that you want to have the higher set temperature to Zone2.

(The mixing valve must be installed in the zone that you want to have the lower set temperature.)

- 1 Install the mixing valve. (See "Installation of mixing valve.")
- 2 Install the water-out temperature sensors (Tw2_z1, Tw2_z2) for all zones.
- 3 Unlike the zone control with a thermostat, connect the water pump signal lines to the product.
 - ▶ Zone1 water pump connection: B10 (L1) + B11 (N)
 - ▶ Zone2 water pump connection: B14 (L1) + B15 (N)
- 4 FSV 4061 = 1: Enable the 2-zone control using the wired remote controller.

* If you want to operate the 2-zone control by using water-out temperatures, you have only to complete steps 1 to 4 above.

* If you want to operate the 2-zone control by using room temperatures and built-in temperature sensors in wired remote controllers, you must install two wired remote controllers in each room.

(If you use external room temperature sensors, you can control each room temperature with only one wired remote controller.)

5. Installation

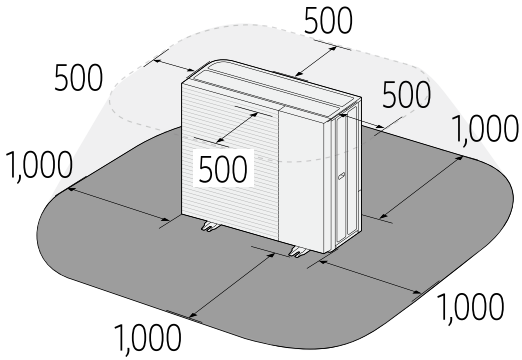

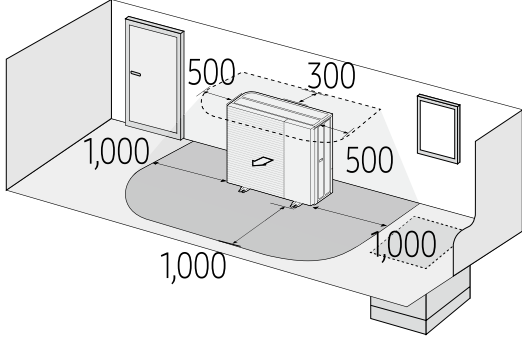

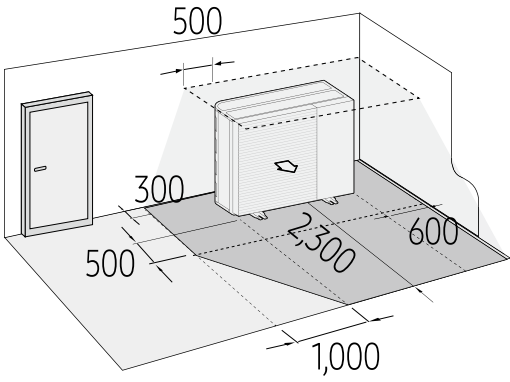

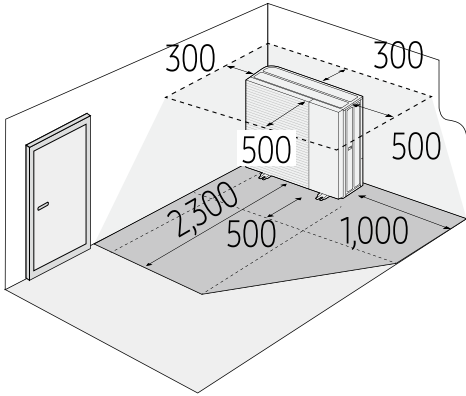

Outdoor unit

Safety Zone

⚠ WARNING

- In case of a leakage the refrigerant must not be able to enter the indoor under any circumstances. The Safety Zone shall not have any building openings such as: Windows, Doors, Light wells, Flat roof windows, Air Inlet / Outlet of ventilation systems, etc.
- R-290 refrigerant is heavier than air and can be collected on the ground. There should be no sinking or deepening of the ground in the safety zone.
- The safety zone should not extend to intact buildings or public spaces.
- The safety zone cannot be modified later to violate the protection rules.

(Unit : mm)

 <ul style="list-style-type: none">• When installed on the ground• When installed in a place with a flat roof	 <ul style="list-style-type: none">• When installed on the ground in front of a building wall
 <ul style="list-style-type: none">• When installed at the right corner of a building	 <ul style="list-style-type: none">• When installed at the Left corner of a building

5. Installation

Outdoor unit

When installing 1 outdoor unit

(Unit : mm)

- Wall on suction-side

- When the air outlet is towards the wall

- Top-side obstacle
- Discharge-side obstacle
- Wall on discharge-side

- Top-side obstacle
- Wall on suction-side

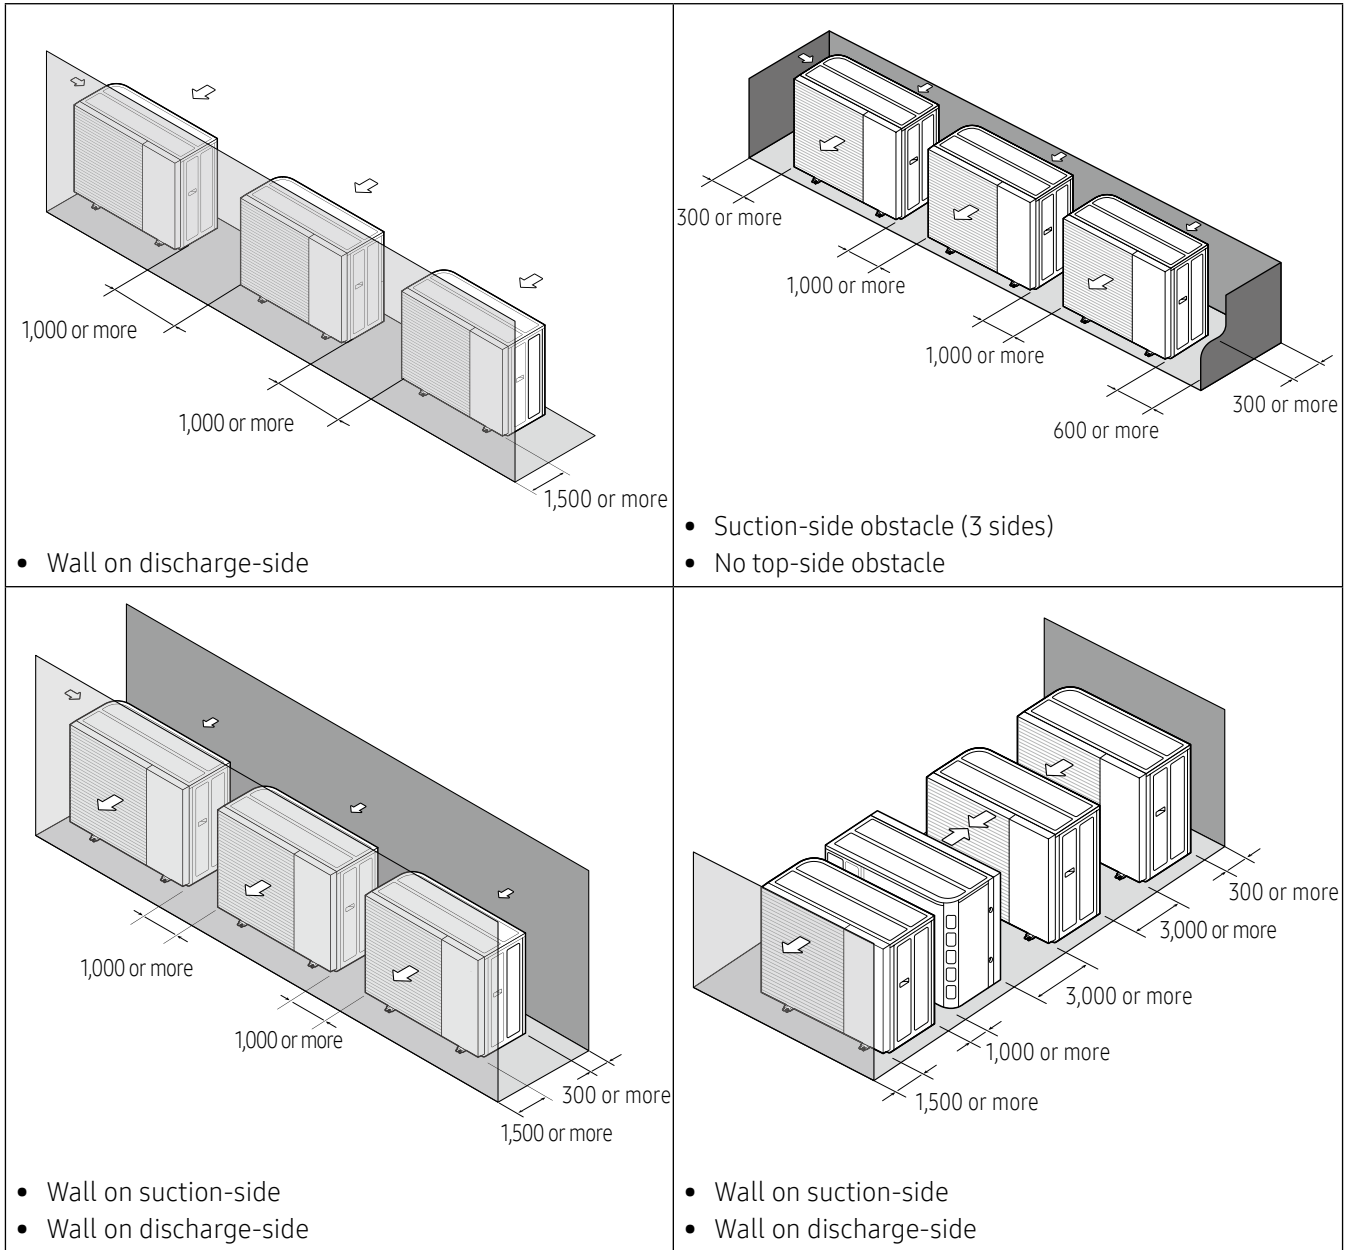

- Suction-side obstacle
- Wall on discharge-side

5. Installation

Outdoor unit

When installing more than 1 outdoor unit

(Unit : mm)

CAUTION

- The units must be installed according to distances declared, in order to permit accessibility from each side, to guarantee correct operation of maintenance or repairing of the products. The unit's parts must be accessible and serviceable under safe working conditions (for people or things).

5. Installation

Outdoor unit

Mounting the outdoor unit

The outdoor unit must be installed on a rigid and stable base to avoid any increase in the noise level and vibration, particularly if the outdoor unit is to be installed in a location exposed to strong winds or at a height, the unit must be fixed to an appropriate support (wall or ground).

CAUTION

- When tightening the anchor bolt, tighten the rubber washer to prevent the outdoor unit bolt connection part from corroding.
- Make a drain outlet around the base for outdoor unit drainage.
- If the outdoor unit is installed on the roof, you have to check the ceiling strength and waterproof the unit.
- The anchor bolt must be 20 mm or higher from the base surface.
- ※ In order to prevent freezing of water drains, additional protection such as application of a heating cable may be required.

5. Installation

Outdoor unit

General area

While the air to water heat pump is operating in heating mode, ice can accumulate on the surface of the condenser. To prevent ice from growing, the system occasionally enters a defrost mode and the ice on the surface thaws off. Water dripping from the condenser is guided through the drain holes to prevent ice formation inside the base plate at subzero temperatures.

- In case there is not enough space for natural drainage from the outdoor unit, additional drain work is required. Follow the description as per below:
 - Provide a minimum of 150 mm of free space to the floor.
 - Insert the drain plug into the hole at the bottom of the outdoor unit.
 - Connect the drain hose to the drain plug.
 - Make sure dirt and debris cannot block the drain (hose). Clean the base plate whenever needed.
 - For the remaining holes (that do not have the drain plug), insert the drain cap
 - Make sure that the water dripping from the drain hose runs away correctly and safely.

WARNING

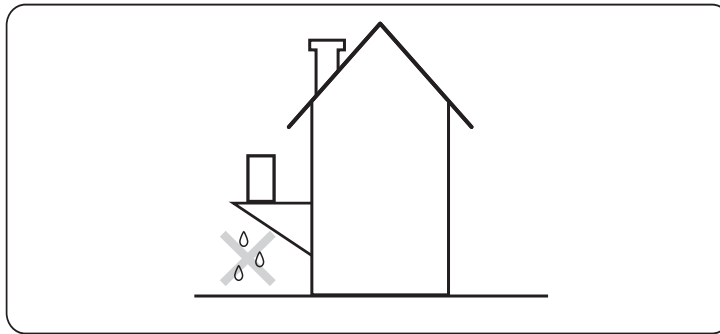

- If the drainage is not adequate, it can lead to stagnant water and ice build-up, causing system performance issues and possible damages.

- 1 Prepare a water drainage channel around the foundation, to drain waste water from around the unit.
- 2 If the water drainage from the unit is inadequate, please raise the unit on construction concrete blocks, etc. (the height of the construction should be at least 150 mm).

5. Installation

Outdoor unit

- 3 If you install the unit on a frame, please install a slanted waterproof plate within 150 mm of the underside of the unit to prevent water from splashing against the bottom plate from below.
 - 4 When installing the unit in a place frequently exposed to snow, pay special attention to elevating the foundation as high as the average snow height plus the additional required 150 mm.
 - 5 If you install the unit on a wall support bracket, please install drainage pipework. In order to avoid the drain water from dripping on the floor potentially creating a slippery surface or an ice layer under freezing conditions.
- ※ Please securely mount the outdoor unit before connecting the water piping.

5. Installation

Outdoor unit

About the piping work

Water connections must be made in accordance with the Water Piping and Wiring diagram delivered with the unit, respecting the water inlet and outlet. If air, moisture or dust gets in the water circuit, problems may occur. Therefore, always take into account the following when connecting the water circuit:

- Use clean pipes only.
- Hold the pipe end downwards when removing burrs.
- Cover the pipe end when inserting it through a wall so that no dust and dirt enter.
- Use a good thread sealant for the sealing of the connections.
- The sealing must be able to withstand the pressures and temperatures of the system. When using non-brass metallic piping, make sure to insulate both materials from each other to prevent galvanic corrosion.
- Because brass is a soft material, use appropriate tooling for connecting the water circuit. Inappropriate tooling will cause damage to the pipes.

CAUTION

- Be careful not to deform the unit piping by using excessive force when connecting the piping. Deformation of the piping can cause the unit to malfunction.
- Always use two wrenches (spanners) for tightening or loosening the water connections, and tighten connections with a torque wrench as specified in the below table. If not, connections and parts can be damaged and leak.
- The unit is only to be used in a closed water system. If applications are in open water circuit, it will generate heat exchangers fouling, corrosion, and leak.

Name	Tightening torque	
BSPP1	350~380 kgf•cm	34~37 N•m

Connecting the water pipes

Connecting the water piping typically follows the below procedure:

- 1 Connect the water piping to the outdoor unit.
- 2 Connect the water piping to the indoor unit.
- 3 Connect the recirculation piping.
- 4 Connect the drain hose to the drain.
- 5 Fill the water circuit.
- 6 Fill the DHW tank.
- 7 Insulate the water piping.

NOTE

- Do not use excessive force when connecting the piping. Deformation of the piping can cause malfunctioning of the unit.
 - Connect the shut-off valve (with integrated filter) to the outdoor unit water inlet, using the thread sealant. At this time, the filter should be directed downward so that impurities can be collected.
 - Connect the field piping to the shut-off valve.
 - Connect the shut-off valve to the outdoor unit water outlet, using the thread sealant.
-

5. Installation

Outdoor unit

NOTE

- About the shut-off valve with integrated filter:
 - The installation of the shut-off valve at the water inlet is mandatory.
 - Mind the flow direction of the valve.

Water Charging

Fill water into the outdoor unit by opening the shut-off and drain valves.

5. Installation

Outdoor unit

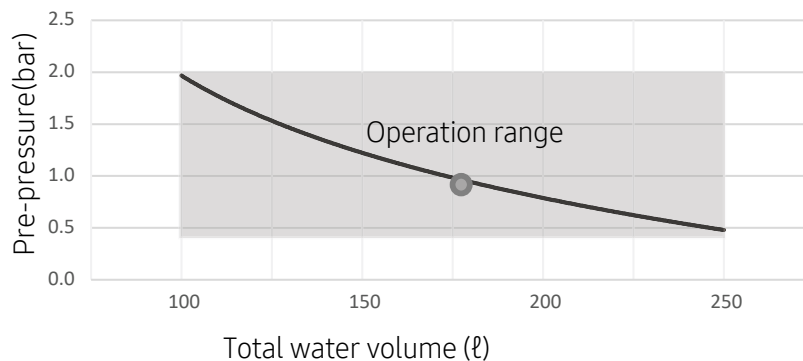

⚠ CAUTION

- The operating range of leaving water temperature is 15~75°C at heating conditions and 5~25°C at cooling conditions.
- The minimum required water flow for operation is 7 liters/min. At all times the required water flow-rates should remain. Otherwise, the unit can stop due to a lack of water.
- Water quality must be according to EN directive 98/83 EC. (Please refer to the reference guide for details.)
- Charge the water higher than pressure of 1.0 bar by using make-up water assembly(Field supply).
(The water pressure indicated on the manometer will vary depending on the water temperature) The nominal water pressure in the system should remain about 1.0 bar at all times to avoid air entering the water system.

Setting capacity and pre-pressure of the expansion vessel

When it is required to change the default pre-pressure of the expansion vessel(1 bar), keep in mind the following guidelines:

- ▶ Use only dry nitrogen to set the expansion vessel prepressure.
- ▶ Inappropriate setting of the expansion vessel prepressure will lead to malfunction of the system. Therefore, the pre-pressure should only be adjusted by a licensed installer.

Installation height difference ^(a)	Water volume	
	<185 Litres	>185 Litres
<7m	No pre-pressure adjustment required.	Actions required: <ul style="list-style-type: none"> • Pre-pressure must be decreased, calculate according to “Calculating the pre-pressure of the expansion vessel”. • Check if the water volume is lower than maximum allowed water volume.
>7m	Actions required: <ul style="list-style-type: none"> • Pre-pressure must be increased, calculate the appropriate value following by “Calculating the pre-pressure of the expansion vessel”. • Check if the water volume is lower than maximum allowed water volume. 	Expansion vessel of the unit too small for the installation.

(a) Installation height difference: height difference(m) between the highest point of the water circuit and the indoor unit. If the unit is located at the highest point of the installation, the installation height is considered 0m.

- When Expansion vessel has a capacity 8 liters and 1bar pre-charged. Water volume of total system for reliable performance is minimum 30 Liter (AE050/080CXVD**), 50 Liter (AE120/160CXVD**).

5. Installation

Outdoor unit

Calculating the pre-pressure of the expansion vessel

- The pre-pressure(P_g) to be set depends on the maximum installation height difference(H) and is calculated as below :
- $$P_g = (H/10 + 0.3) \text{ bar}$$

Protection of the water circuit freezing

To prevent the hydraulic components from freezing, it has a freezing protection function that includes activation of the pump at low temperatures.

However, in case of a power failure, these functions cannot guarantee protection.

To protect the water circuit from freezing, any one of the following acts shall be performed.

- Add glycol to water. Glycol lowers the freezing point of water.
- Install the anti-freeze valve. The anti-freeze valve discharges water from the system before it freezes.

Freeze protection by glycol

Freeze protection solutions must use propylene glycol with a toxicity rating of Class 1 as listed in Clinical Toxicology of Commercial Products, 5th Edition.

WARNING

- Ethylene glycol is toxic and must not be used in the primary water circuit in case of any cross-contamination of the portable circuit.
- If you add glycol to the water, do NOT install anti-freeze valve, to avoid Glycol leaking out of the anti-freeze valves into the environment.
- If an anti-freeze protection is used, it will result in increased pressure drop and it may also cause a slight capacity reduction.

CAUTION

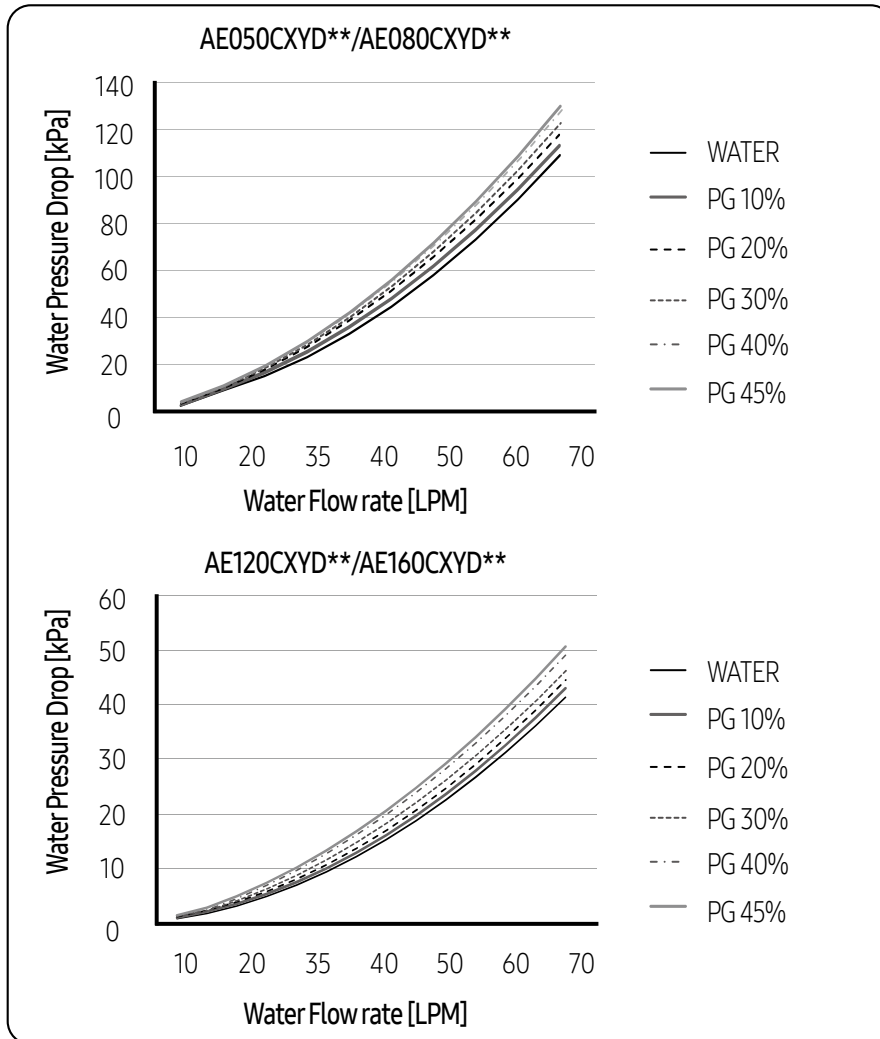

- Due to the presence of glycol, corrosion of the system is possible. Uninhibited glycol will turn acidic under the influence of oxygen. The acidic uninhibited glycol attacks metal surfaces and forms galvanic corrosion cells that cause severe damage to the system.
- A glycol with corrosion inhibitors is selected to counteract acids formed by the oxidation of glycols.
- No automotive glycol is used because their corrosion inhibitors have a limited lifetime and contain silicates which can foul or plug the system.
- Galvanized pipes are NOT used in glycol systems since the presence may lead to the precipitation of certain components in the glycol's corrosion inhibitor.

Unit resistance and PHE resistance by glycol concentrate

The unit is composed of water pipes and PHE basically. To ensure correct operation and predict the expected performance, Flow and Resistance table can be used and Flow and resistance characteristic is dependent on Glycol concentration.

5. Installation

Outdoor unit

Changing Glycol concentration can cause the pressure drop of the system and it can lead to make flow rate slow. Just in case of performance degradation, installer shall be careful of flow rate changes.

The required concentration of glycol depends on the lowest expected outdoor temperature, and on whether you want to protect the system from bursting or from freezing. To prevent the system from freezing, more glycol is required. Add glycol according to the table below.

Freezing Points of Propylene Glycol - Water Mixtures		
Percent Propylene Glycol [wt.%]	Freezing Point [°F]	Freezing Point [°C]
0	32	0
10	26	-3
20	20	-7
30	10	-12
36	0	-18
40	-5	-20
43	-10	-23
48	-20	-29

5. Installation

Outdoor unit

Outdoor water piping insulation

The complete water circuit, inclusive all the piping, must be insulated to prevent condensation during cooling operation and reduction of the heating and cooling capacity as well as prevention of freezing of the outside water piping during winter time. The thickness of the sealing materials must be at least 9 mm with $\lambda=0.035$ W/mK in order to prevent freezing on the outside water piping. If the temperature is higher than 30°C and the humidity is higher than RH 80%, then the thickness of the sealing materials should be at least 20 mm in order to avoid condensation on the surface of the sealing.

For piping in free air, it is recommended to use the insulation thickness as shown in the below table as a minimum (with $\lambda=0.035$ W/mK).

Piping length (m)	Minimum insulation thickness (mm)
< 20	19
20 ~ 30	32
30 ~ 40	40
40 ~ 50	50

NOTE

- This recommendation ensures good operation of the unit, however, local regulations may differ and shall be followed.

Minimum active water volume

The minimum active water volume of the system is the amount of water which is always pumped around, even when all valves in the system are closed. The use of a buffer tank can increase the active volume and therefore the operation time between compressor start and stop.

Ideally, systems should be designed for around 12 to 15 minutes of operation, in order to meet with our declared efficiencies. This time frame is based on a maximum of 4 On/Off cycles per hour. The required minimum active water volume can be calculated via the below stated formula:

$$V_{\min} = \frac{t_{\min} \times \Phi_{\min}}{C_{\text{water}} \times \Delta T}$$

V_{\min} : Minimum active volume

t_{\min} : Minimum allowed operation time is 12 min or 720 sec per cycle

Φ_{\min} : Minimum compressor output

C_{water} : Specific heat of water (4,2)

ΔT : Temperature increase (5-10 K)

[dm³]

[s, sec]

[kW = kJ/s]

[kJ/kg*K]

[K]

5. Installation

Outdoor unit

Electrical wiring diagram

Specification of power cable

- 1 Phase
 - The power cables are not supplied with the air to water heat pump.
 - Power supply cords of parts of appliances for outdoor use shall not be thinner than polychloroprene sheathed flexible cord (Code designation IEC:60245 IEC 57 / CENELEC:H05RN-F)
 - This equipment complies with IEC 61000-3-12.

Outdoor unit	Rated		Voltage Range		MCA	MFA
	Hz	Volts	Min	Max	Min Circuit Amps.	Max Fuse Amps.

- 3 Phase
 - The power cables are not supplied with the air to water heat pump.
 - Power supply cords of parts of appliances for outdoor use shall not be lighter than polychloroprene sheathed flexible cord (Code designation IEC:60245 IEC 66 / CENELEC:H07RN-F)
 - This equipment complies with IEC 61000-3-12 provided that the short-circuit power (SSC) is greater than or equal to 3.3[MVA] at the interface point between the user's supply and the public system. It is the responsibility of the installer to ensure, by consultation with the energy company if necessary, that the equipment is connected only to a supply with a short-circuit power (SSC) greater than or equal to 3.3[MVA].

Outdoor unit	Rated		Voltage Range		MCA	MFA
	Hz	Volts	Min	Max	Min Circuit Amps.	Max Fuse Amps.
AE080CXYDGK	50	380-415	342	457	16.1	17.7
AE120CXYDGK	50	380-415	342	457	16.1	17.7
AE160CXYDGK	50	380-415	342	457	16.1	17.7

5. Installation

Outdoor unit

Terminal block specification

- 1 Phase

(Unit: mm)

AC power: M5 screw

Communication: M4 screw

- 3 Phase

(Unit: mm)

AC power: M5 screw

Communication: M4 screw

Outdoor wiring

- 1 Open the switch side cover.

5. Installation

Outdoor unit

- 2 Insert the cables at the rear of the unit, and route them through the factory mounted cable sleeves into the switch box.

Power and communication cable configuration

- Power supply cable must be guided through the knock-out hole on the bottom-right or right side of the cabinet.
- Guide the communication cable through the designated knockout hole on the bottom-right side of the front part.
- Install the power and communication cable using a separate cable protection tubing.
- Fix the conduit to the knock-out hole on the outdoor unit by using a conduit bushing and nut.

To connect the power supply

- Two cables must be connected to the outdoor unit
 - The communication cable between the indoor and outdoor unit.
 - The power cable between the outdoor unit and the auxiliary breaker.
- Especially for the Russian and European market, before installation, the supply authority should be consulted to determine the supply system impedance to ensure compliance.

CAUTION

- You should connect the power cable into the power cable terminal and fasten it with a clamp.
 - The unbalanced power must be maintained within 2% of the supply rating.
 - If the power is unbalanced greatly, it may shorten the life of the electrical components. If the unbalanced power is exceeding 4% of the supply rating, the control kit is protected, stopped and an error code is displayed.
 - To protect the product from water and possible shock, keep the power cable and the connection cord of the control kit and outdoor units within ducts (with appropriate IP rating and material selection for your application).
 - Ensure that the main supply connection is made through a disconnection switch within your arm's reach, that disconnects all poles, with contact gap of a least 3 mm.
-

5. Installation

Outdoor unit

Route the cable through the frame

- Connect the wires to the terminal block and fix the cable with the cable tie.

- When installing electrical wiring: tension on the cable(s) must be avoided.
- Earth wire for the indoor unit and outdoor unit cables must be clamped to a suitable ring terminal clamp (not supplied)
- For the power cable, use the grade H07RN-F or H05RN-F materials.
- Power supply cords of parts of appliances for outdoor unit use shall not be thinner than polychloroprene sheathed flexible cord. (Code designation IEC:60245 IEC 57 / CENELEC: H05RN-F or IEC:60245 IEC 66 / CENELEC: H07RN-F)

To connect the communication cable

- The communication cable between the indoor and outdoor unit.
- Route the cable through the frame.
- Connect the wires to the terminal block and the earth screw (single side, the other end of the protective shield is not again connected to earth).
- Fix the cable with a cable tie.

5. Installation

Outdoor unit

- Specification of communication cable

Communication cable	Specifications
0.75 mm ² , 2 wires shielded	LiYCY

Important information: regulation regarding the refrigerant used

Please fill in the following with indelible ink on the refrigerant charge label supplied with this product and on this manual.

- ① the factory refrigerant charge of the product.
- ② the additional refrigerant amount charged in the field.

Unit	kg	tCO ₂ e
①, a		
②, b	DO NOT CHARGE	

Refrigerant type	GWP value
R-290	3

- GWP: Global Warming Potential
- Calculating tCO₂e: kg x GWP/1000

NOTE

- a Factory refrigerant charge of the product: see unit name plate.
- b Additional refrigerant amount charged in the field.
(Refer to the above information for the quantity of refrigerant replenishment.)

CAUTION

- The filled-out label must be adhered in the proximity of the product charging port.
(ex. onto the inside of the stop valve cover.)

5. Installation

Control Kit

Mono outdoor + Control kit

• Samsung is not responsible for performance and stability of the backup boiler.

Power and communication with outdoor unit

• Be careful when connecting L, N.

5. Installation

Control Kit

Connecting the power wire

1. Connect 'Live' and 'Neutral' power line with 'L, N' of a ELCB.
2. Connect 'L,N' of a ELCB with 'A1 and A2' in TB-A.
3. Connect 'Protective Earth' line with 'Earth screw' In case.

Recommended wire specification

Load	Power Supply	Power Cable	Max. Length
		mm ² , wires	m
Do NOT use Heater (Water Pump, Valve, Wired RMC)	1Ø, 220-240V, 50Hz	1.5 / 3	L < 10m
		2.5 / 3	10m < L
4.0 / 3		L < 10m	
6.0 / 3		10m < L	

- ▶ The power cable is not supplied with Air to water heat pump.
- ▶ This equipment with "IEC 61000-3-12".
- ▶ Power supply cords of parts of appliances for outdoor use shall not be lighter than polychloroprene sheathed flexible cord. (Code designation IEC:60245 IEC 57 / CENELEC: H05RN-F or IEC:60245 IEC 66 / CENELEC: H07RN-F)
- ▶ When installing the control kit in a computer room or net work room, server room or in the presence of risk of disturbance to the communication cable, use the double shielded (tape aluminium / polyester braid + copper) cable of FROHH2R type.

Connecting the communication wire

- ▶ Connect outdoor unit's F1&F2' with control kit's F1&F2 in TB-C' by 2 core cable.

Communication with a wired remote controller (1 unit)

Communication with a wired remote controller (2 units)

5. Installation

Control Kit

Temp. Sensor for DHW, Backup heater and a Water Flow Sensor

External wiring to control a switch of relay by an installer

Connecting a temp. sensor wire into DHW

1. Put the sensor side of a temp. sensor wire into the designated location in a DHW.
2. Connect the other side of the line at CNS042.

Connecting a temp. sensor wire to outlet of backup heater

1. Put the sensor side of a temp. sensor wire into the designated location in a backup heater.
2. Connect the other side of the line at CNS047.

Connecting a flow sensor

1. Install a flow sensor in water line.
2. Connect a wire a flow sensor into 'CNS057' connector.

Connecting a PV(Photovoltaic) Signal / Peak power control Signal

1. Install as above diagram.
2. Connect the PV / Peak power control signal wire to the 'CNS046' connector.

• It operates according to the setting of FSV, and both functions can not be used at the same time.
(PV Control / Peak power control)

Backup heater

5. Installation

Control Kit

Connecting a relay or a magnetic contactor for a backup heater (Not Directly connect a backup heater)

- Control signals are provided only when CNP401 (Heater Thermostat) is connected.
- Connect a "relay or a magnetic contactor" with "CNP003,CNP001,CNP002".
 - ▶ When a backup heater mode is "ON" at 1st step, a control signal of AC 230V goes through CNP003 and CNP001.
 - ▶ When a backup heater mode is "ON" at 2nd step, a control signal of AC 230V goes through CNP003 and CNP002.

NOTE This port can NOT supply enough power for driving a backup heater. It's just for providing a ON/OFF control signal. Maximum current is 0.5A.

Specification table

Part	Specification
Tab-Terminal (output)	Step1 : CNP003, CNP001 Step2 : CNP003, CNP002
Connection load	Relay or Magnetic contactor for a control signal
Output(CNP003,CNP001 or (CNP003,CNP001)+(CNP003,CNP002)	AC 230V (MAX 0.5A)

Backup boiler

Connection of the back-up boiler

Description	No. of wires	Min. / Max. current	Thickness	Supply Scope
Back-up Boiler	2+ground	10mA / 50mA	0.75mm ² H05RN-F or H07RN-F	Field supply (220-240V~, Input)

B5 : Neutral (N)
B4 : Back-up boiler (L)

When it set back up boiler on the control kit (relay off)

When it order to back up boiler operates (relay on)

- Before the installation, control kit should be turned off.
 - Using the appropriate equipment to correct position of terminal block as shown on the diagram.
 - Make sure EXT-CTRL signal of back up boiler must be 220-240V~.
 - Do not connect supply power of back up boiler directly.
- * Heat pump does not work when the Back-up boiler operates.

5. Installation

Control Kit

Connection guide of additional pump

Case 1) INV. pump

Connect the PWM control external type pump to PWM terminal block and power cable to the external contact terminal. The maximum number of additional pump installation is one inverter pumps (Input power 100W).

1. Power supply (For additional INV. Pump)
2. PWM control (For additional INV. Pump only)

CAUTION • If there is wrong wiring between PWM and reference, INV. Water Pump may not work or wrong operation.

PWM characteristic curve

The additional pump should be the same type of product as the above graph.
5~16kW : GRUNDFOS UPMM 25-95 (Heating Type)

Case 2) AC pump

The maximum number of additional pump installation is one AC pumps (Input power 100W).

1. Power supply (AC Pump)

CAUTION • Terminal of this product is for additional water pump and the maximum allowable current is 0.5 A.

5. Installation

Control Kit

Connection of the 2-way valve

Description	No. of wires	Min. / Max. current	Thickness	Supply Scope
Motorized 2-way valve to shut off UFH loops during cooling.	2+ground	10mA / 50mA	> 0.75 mm ² , H05RN-F or H07RH-F	Field supply (220-240V~, Output)

* Connection of 2 wires 2-way valve

In case of normal open type

2-way motorized valve

- ▶ When outlet water temperature reach to lower than 16 °C in cooling mode, UFH loops will be closed.
 - ▶ 220-240V~
 - ▶ 2 wires(Normal Open or Normal Close)
1. Before the installation, control kit should be turned off.
 2. Using the appropriate equipment to correct position of terminal block as shown on the diagram.
 3. Make sure what type is you use.
 - Normal OPEN or Normal CLOSED.

CAUTION ⚠

- There are 2 types of 2-way valve, normal open type and normal closed type. Make sure to connect terminals to right positions of terminal block. As detailed on the wiring diagram and illustrations above.

Connection of the 3-way valve

Description	No. of wires	Min. / Max. current	Thickness	Supply Scope
Diverting type 3way valve	4	10mA / 50mA	> 0.75 mm ² , H05RN-F or H07RN-F	Field supply (220-240V~, Input)

Status	L1	L2
A (Initial)	OFF	ON
B	ON	OFF

3-way diverting valve for water tank

- ▶ Diverting typecooling mode, UFH loops will be closed.
 - ▶ 220-240V~
1. Before the installation, control kit should be turned off.
 2. Using the appropriate equipment to correct position of terminal block as shown on the diagram.
 3. Make sure what type of 3 way V/V you use.

5. Installation

Control Kit

Connection of the thermostat

escription	No. of wires	Max. current	Thickness	Supply Scope
Room Thermostat	4	22mA	> 0.75 mm ² , H05RN-F or H07RH-F	Field supply (220-240V~, Input)

1. Before the installation, control kit should be turned off.
2. Using the appropriate equipment to correct position of terminal block as shown on the diagram.
3. Make sure what type is you use.
 - Contact signal must be "L". When you install two thermostats, thermostat2 is prior to thermostat1.

CAUTION • Product will not operate when signal for cooling and heating mode is inputted at the same time.

Connecting for external contact functions (Only MIM-E03EN model)

Screw size	Tightening torque (N-m)	Part	Terminal code
M3	0.5~0.75	10P Terminal block	1~10

Connecting external sensors for zone control

CAUTION • When connecting sensors, use a Thermistor with the specifications of 10 kΩ at 25 °C, B constant = 3435 k.

Connecting for SG Ready(Smart Grid Ready) control

SG READY Signal 1	SG READY Signal 2	Product operation
Short	Open	Forced thermo off operation
Open	Open	Normal operation
Open	Short	Heating / DHW setting temperature 1step-up operation
Short	Short	Heating / DHW setting temperature 2step-up operation

CAUTION • These parts are optional and not included with the product.
• Turn off the ELCB first before connecting the SG Ready.
